DECARB FAST TRACK: A EUROPEAN PROGRAM TO DECARBONIZE THE INDUSTRIAL SECTOR

4 PARTNERS

- A **2-year energy efficiency program** designed to subsidise to an energy management and optimisation toolbox for industrial facilities.
- **Personalised experts support** and knowledge sharing **community**.
- Our common ambition?

1 0 0 0 0 0 tons of CO₂ avoided

- Backed by the **French government** in its [Energy Sobriety Plan](#)
- It is a powerful lever for the industries that are at the heart of our **economic stability and resilience**.
- It contributes to our common goal between EU and Japan of **reducing carbon emissions and limiting climate change to 1.5°C by 2050**.

WE ENCOURAGE

Governments to support initiatives from private companies for a more coordinated effort between different stakeholders.

AN ENERGY PERFORMANCE COMMUNITY SERVING DECARBONIZATION

On October 12th, 2023, we launched the community of industrial Pioneers.
Among them:

In less than **1 year**, the program now counts **+50 industrial groups** of all sectors and from **8 countries**, all committed to decarbonization. This new private sector-led cooperation model **could be replicated in other European countries and in Japan** with local or global stakeholders.

TO NURTURE THIS COMMUNITY SPIRIT

We encourage to **unify regulations and methods** related to decarbonization such as the carbon impact tracking, and to favorize the **digitalization** of the industrial sector to keep up with the challenges related to decarbonization.
