Language	English/Japanese (simultaneous translation)
Participation	Free (pre-registration required) / Networking Reception ¥2,000/person
Registration	http://www.eu-japan.eu/space-industry-symposium

Overview

The adoption of the EU's Space Strategy in October 2016, and Japan's Space Industry Vision 2030 in May 2017, exemplifies that the momentum in the sector is stronger than ever. To maximize the benefits of space technology, the EU and Japan are jointly promoting further utilisation of space data especially by startups and SMEs, expanding roles to be played by commercial sectors. In the symposium, the respective authorities will discuss their future vision in the Space Industry, and present case studies of programmes which are offered to the public to promote further entry to the downstream application sector.
